Heavy Duty Industrial Multimeter PCE-HDM 20-ICA

**Digital multimeter PCE-HDM 20-ICA incl. ISO calibration certificate
TRMS digital multimeter for current, voltage, capacity, frequency and resistance /
CAT IV 600 V / CAT III 1000 V / with contactless temperature measurement via infrared /
MAX, MIN and HOLD function**

The multimeter PCE-HDM 20-ICA is a universal measuring instrument. The multimeter PCE-HDM 20-ICA allows a variety of measurement projects. This makes it easy to investigate current, voltage, capacitance, frequency and resistances. In addition to these measurements, the PCE-HDM 20-ICA digital multimeter can also perform measurements such as duty cycle, diode test and continuity test.

In addition to the electrical parameters, the digital multimeter can also be used for temperature determination. The determination of the temperature can be done in two different ways. In the first case, the temperature can be measured by plugging in a thermocouple. In the second case, the digital multimeter offers non-contact temperature measurement. For this purpose, an infrared optic is installed on the digital multimeter, which thus enables the temperature determination from a distance. The thermal image is then clearly shown on the display. For a closer look, there are five different colour palettes available, which can be chosen at will. To measure the temperature using the IR sensor, a lamp helps to make darkened areas brighter. In addition, the digital multimeter has a laser that helps to locate the target area.
